

Submission Worksheet

Submission Data

Course: IT202-008-S2026

Assignment: IT202 - Milestone 3

Student: Emperor G. (eg278)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 5/2/2026 7:11:37 PM

Updated: 5/5/2026 8:23:48 PM

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT202-008-S2026/it202-milestone-3/grading/eg278>

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-008-S2026/it202-milestone-3/view/eg278>

Instructions

1. Refer to Milestone3 of this doc:
<https://docs.google.com/document/d/1XE96a8DQ52Vp49XACBDTNCq0xYDt3kF29cO88EWWwfo/view>
2. Ensure you read all instructions and objectives before starting.
3. Ensure you've gone through each lesson related to this Milestone
4. Switch to the Milestone3 branch
 1. `git checkout Milestone3` (ensure proper starting branch)
 2. `git pull origin Milestone3` (ensure history is up to date)
5. Fill out the worksheet below
 - Ensure there's a comment with your UCID, date, and brief summary of the snippet in each screenshot
 - Ensure proper styling is applied to each page
 - Ensure there are no visible technical errors; only user-friendly messages are allowed
6. Once finished, click "Submit and Export"
7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to GitHub
 1. `git add .`
 2. `git commit -m "adding PDF"`
 3. `git push origin Milestone3`
 4. On GitHub merge the pull request from Milestone3 to qa
 5. On GitHub create a pull request from qa to prod and immediately merge. (This will trigger the prod deploy to make the Render.com prod links work)
8. Upload the same PDF to Canvas
9. Sync Local
10. `git checkout qa`
11. `git pull origin qa`

Section #1: (3 pts.) Api Data

Progress: 100%

⇒ Task #1 (1 pt.) - Concept of Data Association

Progress: 100%

Details:

- What is the concept of your data association to users? (examples: favorites, wish list, purchases, assignment, etc)
- Describe with a few sentences

Your Response:

Since my api revolves around golf data, the concept is user-selected golf tournaments. uUsers are able pick any tournament and associate them with their account. This grant the users their own list of tournaments they want to track or view in their My Golf Tournaments page.

Saved: 5/5/2026 7:59:02 PM

≡ Task #2 (1 pt.) - Data Updates

Progress: 100%

Details:

- When an associated entity is updated (manually or via API), how is the association affected?
 - Does the user see the old version of the data?
 - Does the user see the new version of the data?
 - Does the user need to have data re-associated or remapped?
- Explain why.

Your Response:

- The association is never affected due to the fact that it only stores the tournament ID. Depending on what the user wants to do with tournament, the user can either see he old and new version of the tournament. In reagrds to the new version, the API will update the main fields like the tournament's name, dates, etc. Since the association table stores only the user_id and golf_id, the user is able to see the new update version of the tournament. Also, the user don't need to remap anything; the tournament's id will stay the same.

Saved: 5/5/2026 8:09:09 PM

≡ Task #3 (1 pt.) - Handling Association

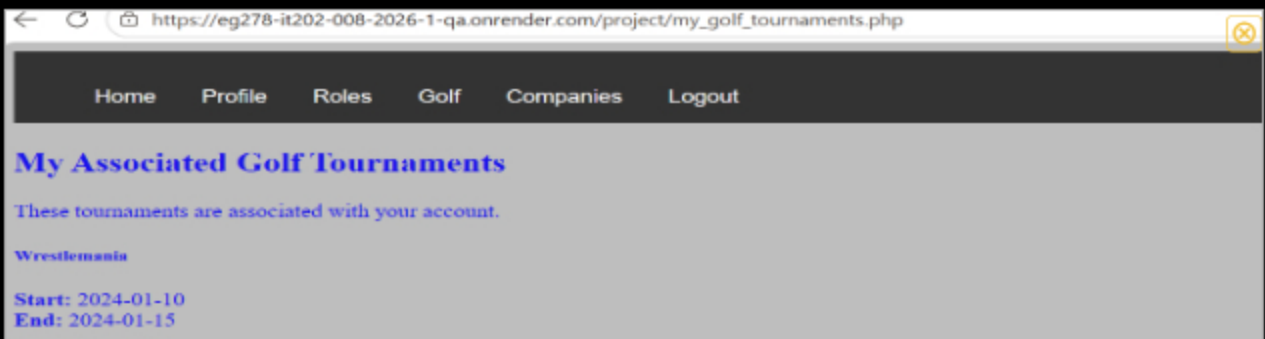

Progress: 100%

Part 1:

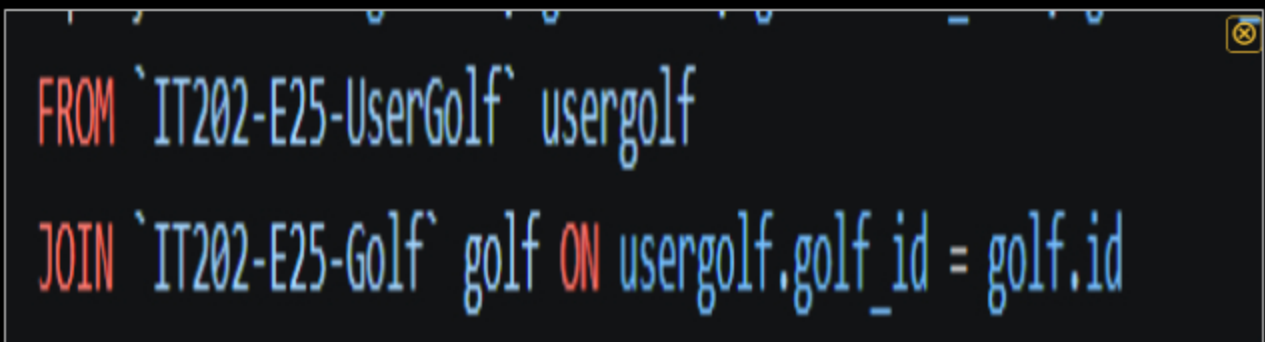

Progress: 100%

Details:

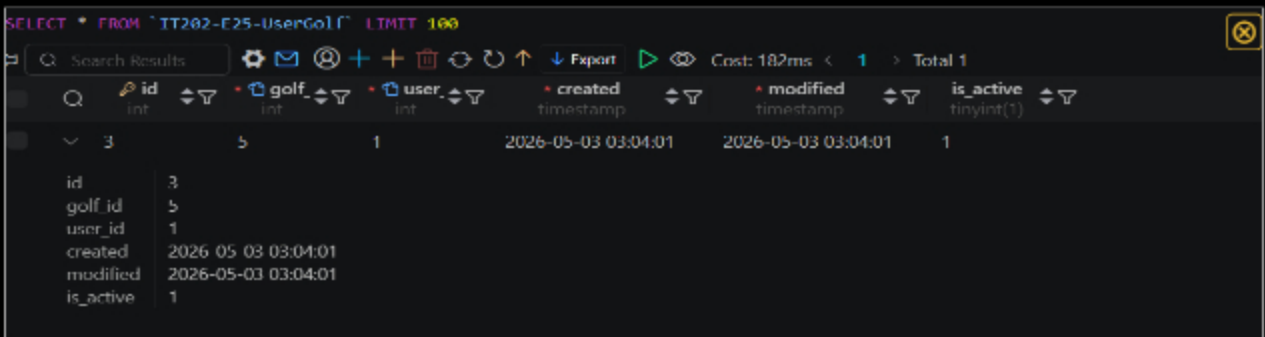

- Show an example page of where a user can get data associated with them
- Ensure the Render.com qa URL is visible
- Caption if this is a user-facing page or admin page
- Include screenshots of code related to this logic including the database query

user facing page

database query

sql table displaying the association

Saved: 5/2/2026 11:37:13 PM

Part 2:

Progress: 100%

Details:

- Include the pull request link for this feature
- Include the Render.com prod link to this page that triggers and handles this logic

Saved: 5/2/2026 11:37:13 PM

⇒ Part 3:

Progress: 100%

Details:

- Describe the process of associating data with the user.
- Can it be toggled, or is it applied once?

Your Response:

- Once a user logs in, their user ID is stored in the session. In order to associate the data with the user, I would need to insert a certain row into the UserGolf table that has the user_id and the golf_id. This table behaves as a link between the user and the golf tournament. The way for the page to show only the tournaments that is associated with a particular record is when the user-facing page joins with UserGolf and Golf tables to gain all tournaments where the user_id aligns with the logged-in user. It can be toggled; its possible the data can be removed but it all depends whether or not the row exists in the association table.

Saved: 5/2/2026 11:37:13 PM

Section #2: (6 pts.) Associations

Progress: 100%

≡ Task #1 (1.50 pts.) - Logged-in User's Associated Entities

Progress: 100%

Details:

- Each line item should have a logical summary
- Each line item should have a link/button to a single view page of the entity
- Each line item should have a link/button to a delete action of the relationship (doesn't delete the entity or user, just the relationship)
- The page should have a link/button to remove all associations for the particular user
- The page should have a section for stats (number of results and total number possible based on the query filters)
- The page should have logical options for filtering/sorting

- The page should have logical options for filtering/sorting
- A limit should be applied between 1 and 100 and controlled by the user (server-side enforces rules)
- A filter with no matching records should show "no results available" or equivalent

Part 1:

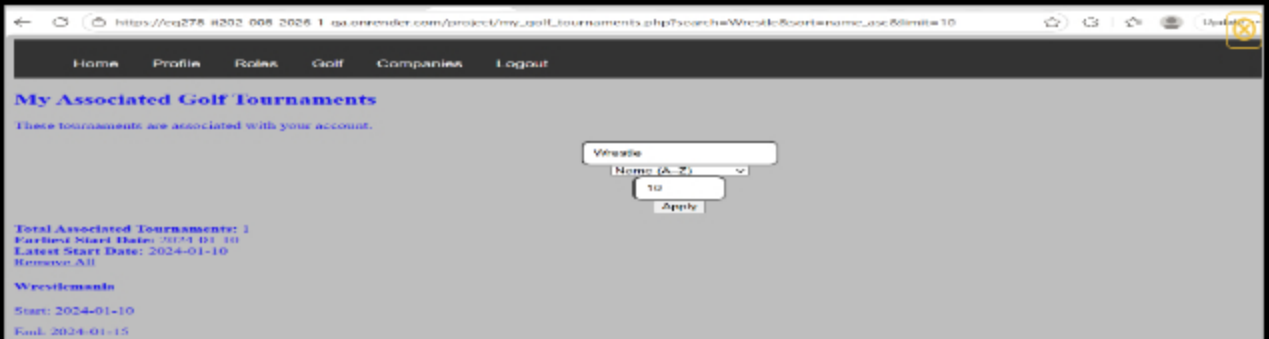

Progress: 100%

Details:

- Show a few examples of this page from Render.com qa with various filters applied
- Ensure the Render.com qa URL is visible
- Ensure each requirement is visible
- Include the code screenshots related to this page

default page no filters

search filter

applied sorting(DESC)

```
switch ($sort) {
    case "name_desc":
        $query .= " ORDER BY golf.name DESC";
    }
}
```

Part 3:

Progress: 100%

Details:

- Describe how you implemented the association output
- Describe how you solved the various items required for this page (i.e., line item requirements, stats, filter/sort, etc)

Your Response:

- In order to implement the association output, I had to create a user-facing page that will gain information on all the tournaments associated with current logged in user. I got the user_id and executed a SQL query that will join the association table(my UserGolf table) alongside my Golf table. On the user association page, there you'll see a summary of the tournament, view link, edit, and remove link. The stats section will show the number of results from the current filter and number of potential results before the filters. The filters were GET parameters involving searching by tournament name, and filtering by date. If no records aligns with the results, the page shows "No results available". In sorting, there is sorting by name and direction (ASC and DESC). The limit will remain between 1 and 100. Lastly, there's a Remove All, where it will delete all associations related to the logged-in user but won't delete the tournaments.

Saved: 5/5/2026 9:41:43 AM

Task #2 (1.50 pts.) - All Users Association Page

Progress: 100%

Details:

- Each line item should have a logical summary
- Each line item should include the username this entity is associated with
 - Clicking the username should redirect to that user's public profile
- Each line item should include a column that shows the total number of users the entity is associated with
- Each line item should have a link/button to a single view page of the entity
- Each line item should have a link/button to a delete action of the relationship (doesn't delete the entity or user, just the relationship)
- The page should have a section for stats (number of results and total number possible based on the query filters)
- The page should have logical options for filtering/sorting
 - Include a filter for partial username match to show only matching users' associated entities
 - A limit should be applied between 1 and 100 and controlled by the user (server-side enforces rules)
 - A filter with no matching records should show "no results available" or equivalent
- When a filter is applied, the page should have a link/button to remove all associations for the matching user(s)

Part 1:

Progress: 100%

Details:

- Show a few examples of this page from Render.com qa with various filters applied
- Ensure the Render.com qa URL is visible
- Ensure each requirement is visible
- Include screenshots of code related to this logic including the database query

Part 3:

Progress: 100%

Details:

- Describe how you implemented the association output
- Describe how you solved the various items required for this page (i.e., line item requirements, stats, filter/sort, etc)

Your Response:

I implemented the association output through joining the usergolf table with the users table and the golf table. The alias i used was usergolf for the association page so that users can read and understand the SQL. The query will get each association with username, tournament name, start and end dates, and a field to calculate the number of users who are associated with each tournament.

⇒ Part 3:

Progress: 100%

Details:

- Describe how you implemented the association output
- Describe how you solved the various items required for this page (i.e., line item requirements, stats, filter/sort, etc)

Your Response:

- In order for the output to show for the unassociated tournament list, I form a SQL query that can return all tournaments that aren't associated with the current user. There is a NOT IN subquery to where it can move aside tournaments that already existed in the usergolf association page. Every tournament has a tournament name, description that is available for association, start and end date, and the view link. The stats section show the number of results that was returned from the main query once after the filters, sorting, and the applied limit. The search box is meant to input the tournament name,; this filter will update the main query, results, and stats query. The sorting dropdown functions of the ORDER BY depending on what the user selects: name a-z, name z-a, start date. The limit selection gives the users control over the number of results it can appear on each page.

Saved: 5/5/2026 5:51:24 PM

≡ Task #4 (1.50 pts.) - Admin Association Page (Like User Roles)

Progress: 100%

Details:

- The page should have a form with two fields
 - Partial match for username
 - Partial match for entity reference (name or something user-friendly)
- Submitting the form should give up to 25 matches of each
 - Likely best to show as two separate columns
- Each entity and user will have a checkbox next to them
- Submitting the checked associations should apply the association if it doesn't exist;

otherwise it should remove the association

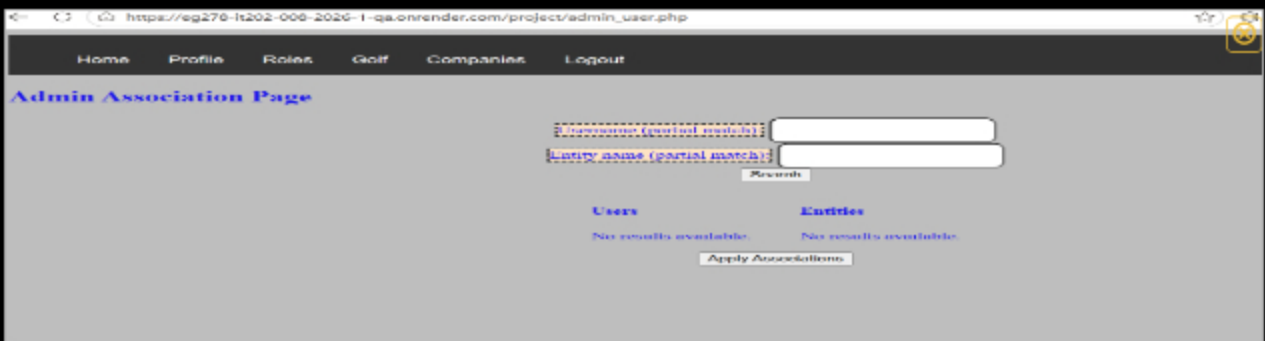

- A filter with no matching records should show "no results available" or equivalent

Part 1:

Progress: 100%

Details:

- Show a few examples of this page from Render.com qa with various selections having been submitted
- Ensure the Render.com qa URL is visible
- Ensure each requirement is visible
- Include screenshots of code related to this logic including the database query

default page

user search

entity search

Search results for users and entities. The Users table lists usernames like 'wfsduser', 'mg776', 'd537961dc79310989757e0f', 'angy174', 'temp04ec', and 'testuser'. The Entities table lists 'Golf Supersystem'. An 'Apply Associations' button is at the bottom.

both columns

The Login page shows a 'Login' button and a message 'Associations updated successfully!'. The URL bar shows 'https://mp278-4202-008-2026-1-upc-render.com/projects/0/login.php'.

associations applied

The Admin Association Page shows search filters for 'Username (partial match)' and 'Entity name (partial match)'. The Users table is empty with the message 'No results available.' The Entities table is also empty with the message 'No results available.' An 'Apply Associations' button is at the bottom.

no results

```
// User search
if ($user_search != "") {
    $stmt = $db->prepare("SELECT id, username FROM Users WHERE username LIKE :uname LIMIT 25");
    $stmt->execute(["uname" => "%$user_search%"]);

Saved: 5/5/2026 7:49:54 PM

Part 3:

Progress: 100%

Details:

- Describe how your code solves the requirements; be clear

Your Response:

- It fulfills the requirement because in the admin association page, there are search inputs like the entity field (golf tournament) and username partial field. Whatever the admin types in either field, the page will read the \$user_search and \$entity_search. Furthermore, each search field will trigger the two SQL queries of Users and Entities, this will ensure partial matching and the maximum number of 25 results. Then you have checkboxes for each field. This where the Apply Associations comes in because whatever user and entity that already exist, you can check off a user and an entity and make them associated with each other. Lastly, there would only be message of "no results available" if both user and entity don't exist and that they return zero rows.

Task #3 (0.33 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

- Based on everything, I learned how to add links to view, edit, and delete each tournament.

Saved: 5/5/2026 8:20:34 PM

Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part was adding Bootstrap elements; adding icons to represent view, edit, and remove.

Saved: 5/5/2026 8:23:48 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part was how to make a user assign themselves with a tournament and see if it can be displaye on the association page.
