Submission Worksheet

Submission Data

Course: IT202-008-S2026
Assignment: Milestone 2 API Testing
Student: Emperor G. (eg278)
Status: Submitted | **Worksheet Progress:** 100%
Potential Grade: 10.00/10.00 (100.00%)
Received Grade: 0.00/10.00 (0.00%)
Started: 4/16/2026 6:58:51 PM
Updated: 4/17/2026 11:28:14 AM

Instructions

- Overview Link: https://youtu.be/86v8Ak0E3XE

1. Ensure you read all instructions and objectives before starting.
2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
3. Create a new branch from `Milestone2` called `M7-Homework`
    1. `git checkout Milestone2` (ensure proper starting branch)
    2. If you don't have `Milestone2` yet, create it from `Milestone1`
    3. `git pull origin Milestone2` (ensure history is up to date)
    4. `git checkout -b M7-Homework` (create and switch to branch)
4. Follow the lesson from
    - Add `testApi.php` to your `project` folder
    - Immediately record to history
        - `git add public_html`
        - `git commit -m "adding M7 HW baseline files"`
        - `git push origin M7-Homework`
        - Create a Pull Request from `M7-Homework` to `Milestone2` and keep it open
5. Fill out the below worksheet
    - Ensure you add the UCID/Date and details comments as you work
    - Get the example working with your chosen API
6. Once finished, click "Submit and Export"
7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
    1. `git add .`
    2. `git commit -m "adding PDF"`
    3. `git push origin M7-Homework`
    4. On Github merge the pull request from `M7-Homework` to `Milestone2`
    5. On Github create and merge the pull request from `Milestone2` to `qa`
    6. On Github create a pull request from `qa` to `prod` and immediately merge. (This will trigger the `prod` deploy to make the Render.com prod links work)

8. Upload the same PDF to Canvas
9. Sync Local
    1. `git checkout qa`
    2. `git pull origin qa`
    3. `git checkout Milestone2`
    4. `git pull origin Milestone2`

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

Task #1 (0.40 pts.) - API Link

Progress: 100%

URL #1
https://rapidapi.com/live-golf-data-live-golf-data-default/api/live-golf-data

URL
https://rapidapi.com/live-golf

Saved: 4/16/2026 6:58:51 PM

Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Details:

- Note: Hard limits stop when reached, soft limits incur costs when reached (and need a valid credit card associated
- It's recommend to use a free API with hard limits over one with soft limits, but be mindful of the quota value as it's easy to waste it (through the site's dashboard and/or your own code)

Your Response:

So my api is the live golf data. The basic plan(free) that the api provides, has 250 requests per month (hard limit) and a rate limit of 60 requests per minute. It restricts scorecards to 20 per day(hard limit). Also, the API offers 10,240 MB of monthly bandwidth alongside the price of $0.001 per MB if there's any usage over the 10,240 MB, in which the bandwidth becomes a soft limit. This basic free plan don't require a credit card.

Saved: 4/16/2026 7:23:43 PM

Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

Your Response:

Since i'm using the live golf data, it will provide modern time and past golf tournament data, which will include schedules, scoreboards, statistics of the player, and their rankings. Specifically for this assignment, i will be focusing on the JSON data that analyzes the tournaments, players, and the scoring.

Section #2: (6 pts.) Verify Api Choice

Progress: 100%

Task #1 (6 pts.) - Edit the `testApi.php` file (and related `.env` content) to test your chosen API

Progress: 100%

Details:

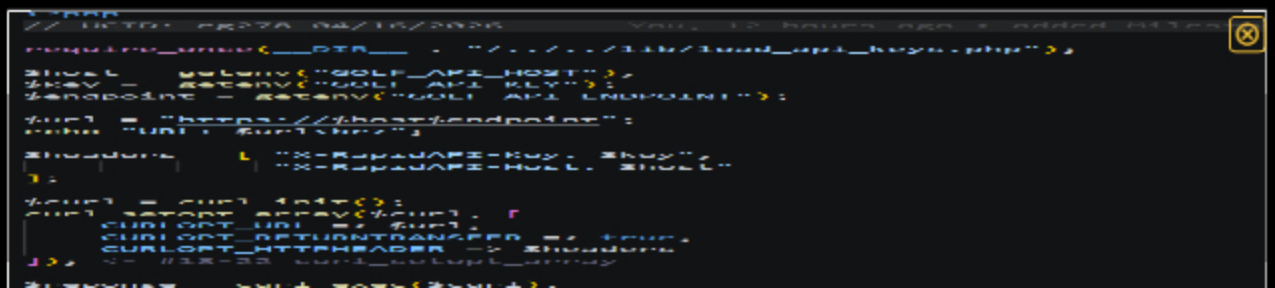
- The code will need to be adjusted since your API differs from the one I chose
- You'll need to apply the API `.env` items to Render.com's Environment variables both on `qa` and `prod`
- Be mindful of your API quota (may need to initially use a cached response until you get it working, refer to the lessons for this)

Part 1:

Progress: 100%

Details:
Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment) 2. Don't show any private details like the API key
2. Full output of executing the `testApi.php` (visit the proper file on Render.com qa after a manual deploy)



part one of the code

```
//curl_close($curl);

if ($error)  {
    echo "<pre>";
    print_r(json_decode($response, true));
    echo "</pre>";
} <- #28-32 if ($error)
?>
```

part two of the code

output of testApi.php

Saved: 4/17/2026 10:55:28 AM

Part 2:

Progress: 100%

Details:

- Direct link to the file in the homework related branch from Github (should end in `.php`, zero credit if it does not)
- Direct link to the file on Render.com Prod (Just grab the base prod url and manually enter the path to the file)

Saved: 4/17/2026 10:55:28 AM

Part 3:

Progress: 100%

Details:
Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

My solution involves the API information details from .env file using a separate PHP file like the my API's key, host, and endpoint. The script will read the host, key, and endpoint in order to develop the full API request URL. The code then initiates the HTTP headersand a cURL request, using the CURLOPT_RETURNTRANSFER in order for the response to be returned as true. Once it runs the request, the script close the cURL session and prints out the API's response and URL.

Task #2 (0.67 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click `Projects` and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Projects · eg278-it202-008-2026

7 hrs 32 mins over the Last 7 Days in eg278-it202-008-2026 under all branches.

Task #2 (0.67 pts.) - Reflection

Task #3 (0.67 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

I learned the importance of how to test my API, execute the URL, and leave out the sensitive information. I had to add the important API credentials like host, key, and the endpoint in order for everything to be securely executed for the API. Overall, I learn how test and verify an API request.

Saved: 4/17/2026 11:14:57 AM

Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of this assignment was adding the environment variables in .env file and in Render qa/prod.

Saved: 4/17/2026 11:16:25 AM

Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of the assignment trying to get the API file to run accurately and

have the file locate the load_api_keys.php file.
